

WEEK-9

1. TITLE OF THE EXPERIMENT:

Develop UI for Hospital Registration Using React (JSX – JavaScript Extension)

2. AIM:

To develop a Hospital Registration User Interface using React.js and JSX that allows users to enter and submit patient registration details through a registration form.

3. PROCEDURE:

1. Create a React project using Vite.
2. Open the project in Visual Studio Code.
3. Create the required React files inside the src folder.
4. Design a Hospital Registration form using JSX.
5. Add input fields such as patient name, email, phone number, age, gender and address.
6. Add form controls such as text boxes, radio buttons and select options.
7. Use CSS to design and align the registration form.
8. Import the CSS file into the React component.
9. Run the React application using the Vite development server.
10. Test the registration form in the browser.

4. CODE:

App.jsx

```
import { useState } from "react";
import "../App.css";

function App() {
  const [formData, setFormData] = useState({
    name: "",
    email: "",
    phone: "",
    dob: "",
    gender: "",
    department: "",
    doctor: "",
    appointmentDate: "",
    symptoms: "",
    terms: false,
  });

  const [registered, setRegistered] = useState(false);

  const doctors = {
    Cardiology: ["Dr. Rajesh Kumar", "Dr. Priya Sharma"],
    Neurology: ["Dr. Anil Rao", "Dr. Sneha Reddy"],
    Orthopedics: ["Dr. Ravi Kumar", "Dr. Meena Patel"],
    Dermatology: ["Dr. Arjun Singh", "Dr. Kavya Rao"],
    Pediatrics: ["Dr. Neha Sharma", "Dr. Vikram Reddy"],
  };

  const handleChange = (e) => {
    const { name, value, type, checked } = e.target;
    setFormData({
      ...formData,
      [name]: type === "checkbox" ? checked : value,
      ...(name === "department" && { doctor: "" }),
    });
  };
}
```

```
const handleSubmit = (e) => {
  e.preventDefault();
  if (!formData.terms) {
    alert("Please accept the terms and conditions.");
    return;
  }
  localStorage.setItem(
    "hospitalRegistration",
    JSON.stringify(formData)
  );
  setRegistered(true);
};

const handleReset = () => {
  setFormData({
    name: "",
    email: "",
    phone: "",
    dob: "",
    gender: "",
    department: "",
    doctor: "",
    appointmentDate: "",
    symptoms: "",
    terms: false,
  });
  setRegistered(false);
};

if (registered) {
  return (
    <div className="success-container">
      <div className="success-card">
        <div className="success-icon">✓</div>
        <h1>Registration Successful!</h1>
        <p>
          Your hospital appointment has been successfully registered.
        </p>
      </div>
    </div>
  );
}
```

```

    </p>

    <div className="appointment-details">

        <p>

            <strong>Patient:</strong> {formData.name}

        </p>

        <p>

            <strong>Department:</strong> {formData.department}

        </p>

        <p>

            <strong>Doctor:</strong> {formData.doctor}

        </p>

        <p>

            <strong>Appointment Date:</strong>{" "}

            {formData.appointmentDate}

        </p>
    </div>

    <button className="new-button" onClick={handleReset}>

        Register Another Appointment

    </button>

</div>

</div>

);
}

5. COMMANDS TO RUN:

Create React Project:

```
npm create vite@latest hospital-registration -- --template react
```

Go to the project:

```
cd hospital-registration
```

Install dependencies:

```
npm install
```

Run the application:

```
npm run dev
```

6. TECHNOLOGIES USED:

Frontend : React.js

Syntax : JSX

Styling : CSS

Build Tool : Vite

Package Manager : npm

Editor : Visual Studio Code

9. RESULT:

Thus, a Hospital Registration User Interface was successfully developed using React.js and JSX with a registration form containing various input controls and styled using CSS.
